

How to Allow Cookies

The Inner Circle is all kept private to you and the other members by a password. Every month the new password will be emailed to you, a few days before it changes. Once it's changed, and you go onto the Inner Circle website, you'll be asked to type in the new password.

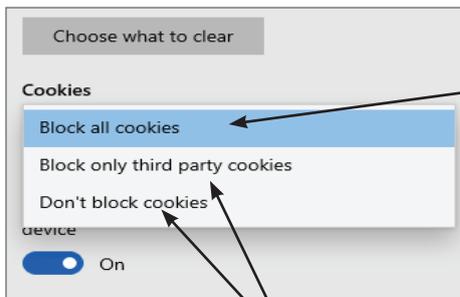

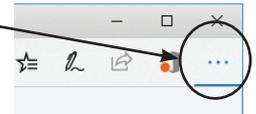

It'll remember that you know it, so you don't have to type it in every time! So far so good. The trouble is that all that only works if your web browser's set up to **allow cookies**.

If you type the password in and it doesn't say it's wrong but just takes you straight back to the screen where you type it in, chances are that your web browser isn't set up to allow cookies from our website.

Here's how to change the setting on various different devices (some are a bit hidden away - sorry).

Microsoft Edge on a PC or laptop

1. Open Edge and click on the little menu button in the top right of the screen.
2. From the menu that pops up, choose "Settings" (it's down near the bottom).
3. Down the side of the Settings panel, you'll see some symbols. Click on the padlock (it might be labelled "Privacy and Security", or it might just be a padlock icon).
4. In the "Privacy and Security" section, you'll find your cookie options:

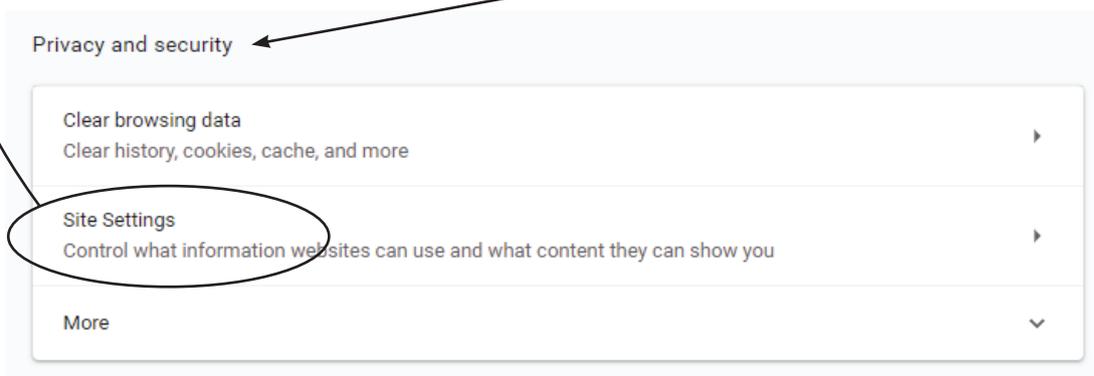

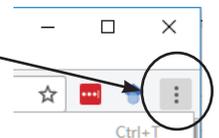

This option stops the Inner Circle (and lots of other websites) from working properly.

You need **one of these two options** turned on for the Inner Circle to work properly – it's up to you which you choose.

A lot of "third-party" cookies track which websites you visit – and that affects which adverts you see online. If you don't like the idea of that, it's fine to block them – it won't affect the Inner Circle.

Chrome on a PC or laptop (it's slightly different on a phone or tablet – see page 3)

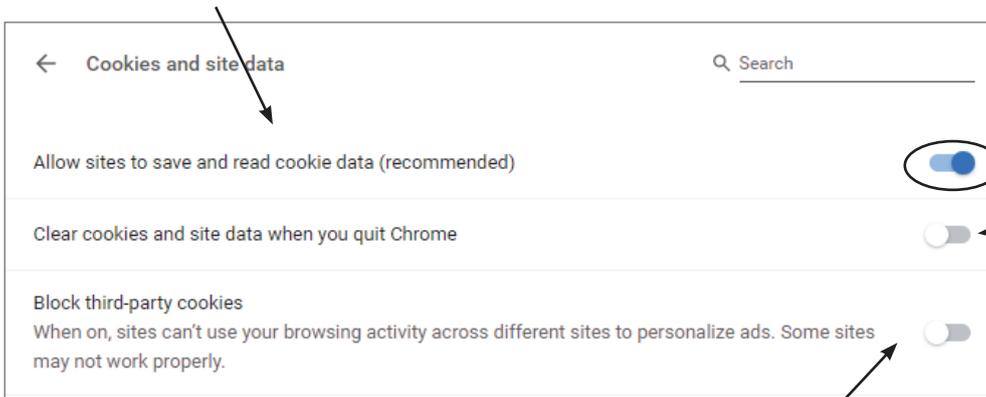

1. Open Chrome and click on the little menu button in the top right of the screen.
2. From the menu that pops up, choose "Settings" (it's down near the bottom).
3. Scroll down the screen until you see the heading "Privacy and Security". Under that, click on "Site settings".

4. In the “Site Settings” menu, under “Permissions”, click on “Cookies and site data”.

5. Then these are your cookie options.

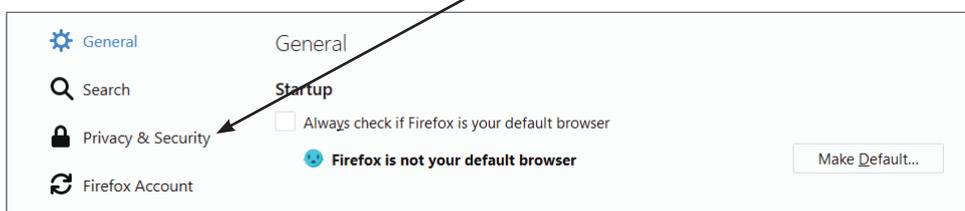

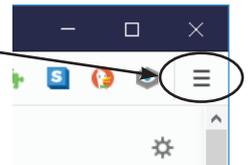

*For the Inner Circle to work properly, this **top option** has to be turned on.*

If you turn on the second option, you'll have to put in the password each time you visit the Inner Circle – it won't remember you from one visit to the next.

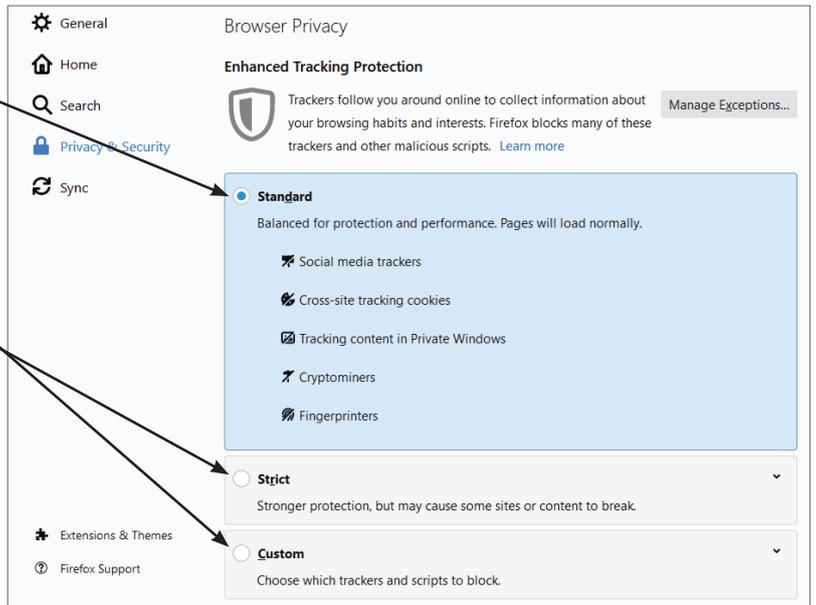

Some people prefer to block “third-party” cookies to stop targeted advertising – doing that won't affect the Inner Circle.

Firefox on a PC or laptop

1. Open Firefox and click on the little menu button in the top right of the screen.
2. From the menu that pops up, choose “Options” (about half-way down the menu).
3. From the options on the left, choose “Privacy & Security”.

- Under “Browser Privacy”, you can choose from “Standard”, “Strict” or “Custom” settings.

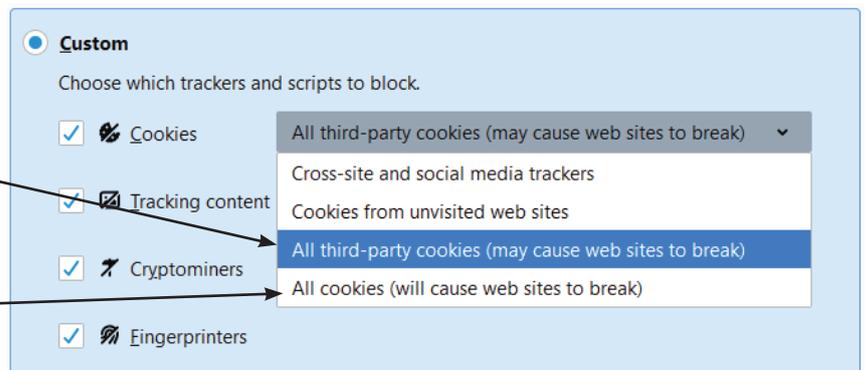

The Inner Circle website should work fine with either the “Standard” or “Strict” protection turned on.

- If you choose custom settings, you get more control over which cookies are saved:

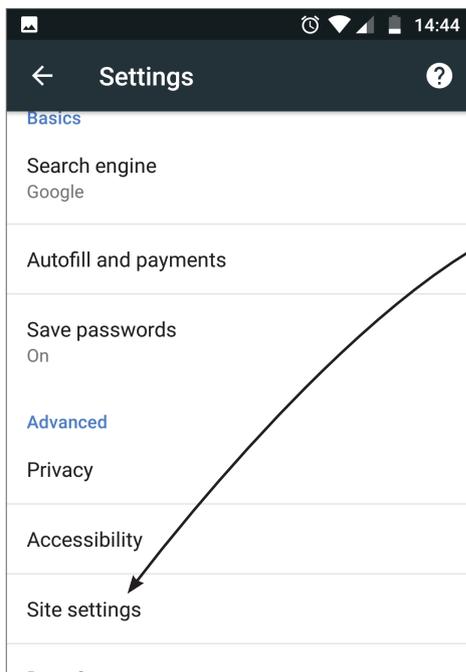

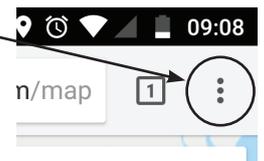

Some people prefer to block all “third-party” cookies – you can do that here if you like.

For the Inner Circle to work properly, you don’t want to choose “All cookies”.

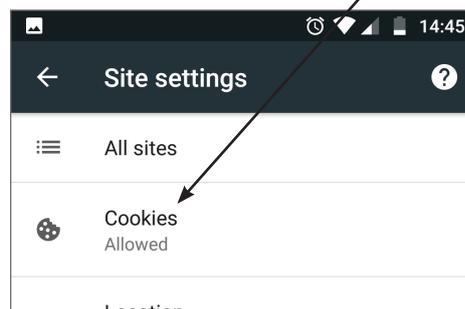

Chrome on a smartphone or tablet (it’s slightly different on a PC – see page 1)

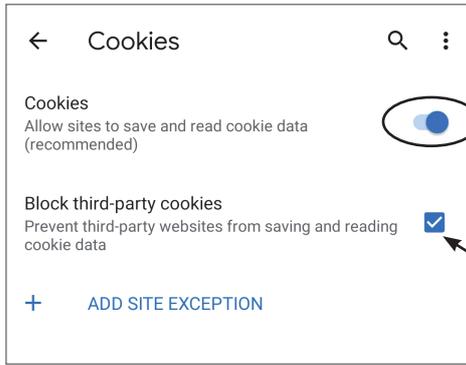

- Open Chrome and tap on the little menu button in the top right of the screen.
- From the menu that pops up, choose “Settings” (it’s down near the bottom).

- Swipe through the settings until you get to Advanced, then tap on “Site settings”.
- On the next screen, tap “Cookies”.

5. On the next screen, you'll find your cookie options:

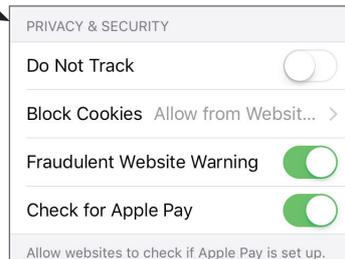

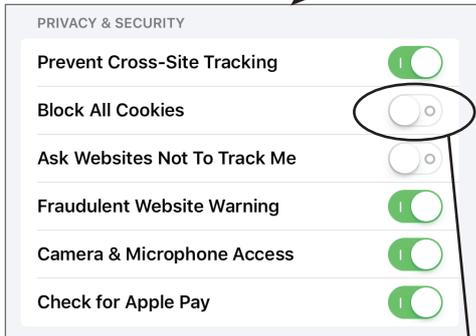

For the Inner Circle to work properly, this switch has to be turned on.

Some people prefer to block "third-party" cookies to stop targeted advertising. If you want to do that, just tick this box – it won't affect the Inner Circle.

Safari on an iPad or iPhone

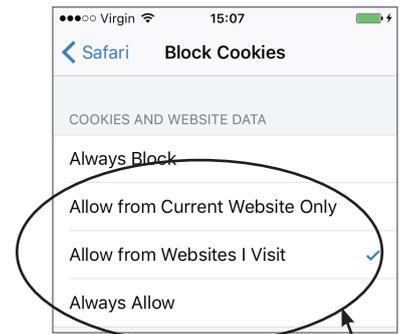

Annoyingly, you get slightly different options depending on how old your device is (or rather, which version of iOS it's running). The first few steps are the same for any iPad or iPhone, though:

1. Open the Settings App.
2. Swipe up until you get to "Safari" and tap on it.
3. Then depending on your device, you'll either get a set of "Privacy & Security" options like this, or this:

If your options look like this, tap on "Block Cookies" to bring up another menu:

In this set of options you need to have "Block All Cookies" turned **off** (like in the picture). It's fine to leave "Prevent Cross-Site Tracking" on though – that only blocks what are called "third-party" cookies, not the sort you need for the Inner Circle to work. Some people prefer to block third-party cookies to stop targeted advertising.

For the Inner Circle to work properly, you need to choose one of these settings (one that **isn't** "Always Block"). If you don't want any "third-party" advertising cookies, choose "Current Website Only".
